### **DETAILED ACTION**

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Inoue.

With respect to claim 13, figure 11A of the reference shows four channel areas, all the same conductive type, arranged separately and in parallel to each other, electrically connected in parallel with respect to a current path by common electrodes 39 and 40. Laser anneal is taught at column 9, lines 20-25, and would have been obvious for the embodiment of figure 11A to form polycrystalline film. With respect to claim 14, the distance between the channel areas includes a separation area, which gives a virtual channel larger than any of the real channels, so it would be larger than any defective parts of the real channels. With respect to claim 15, amorphous silicon is taught at column 18, lines 48-52.
